

Study of stair-climbing assistive mechanisms for the disabled

Murray John LAWN

Dissertation submitted to the faculty of Mechanical Systems Engineering
For the Degree of Doctor of Philosophy

Graduate School of Marine Science and Engineering
Nagasaki University, Nagasaki City, Japan

December 2002

Table of Contents

1	Introduction	1
1.1	Why stairs?.....	1
1.2	Stairs - are they safe?	3
1.3	Wheeled mobility	4
1.4	Wheels and stairs	5
1.4.1	Motive force, curb height and wheel diameter	6
1.5	Requirements for stair-climbing mobility	9
1.6	Common stair-climbing techniques and assistive devices	11
1.6.1	Assistant based curb, slope and stair negotiation techniques.....	11
1.6.2	Common stair-climbing and van entry assistive devices	13
1.7	Stairs - discussion.....	15
1.8	Thesis outline	16
2	Recent advances in mobility assistive devices for stairs or curbs.....	18
2.1	Curb assistive mechanisms for wheelchairs.....	18
2.2	Curb capable powered wheelchairs and mobility scooters	19
2.3	Tracked based stair-climbers.....	21
2.4	Lightweight wheelchair stair-climbing attachments	23
2.5	Wheel cluster based stair-climbers.....	25
2.6	COG modification wheel cluster based stair-climber	27
2.7	Dual wheel cluster based stair-climber	29
2.8	Miscellaneous stair-assist and van entry mechanisms	30
2.9	Recent advances in mobility assistive devices for stairs or curbs, summary and discussion.....	31
3	Proposed high step and stair-climbing mechanism.....	35
3.1	Introduction.....	35
3.2	Proposed mechanism.....	35
3.3	Modeling process	36
3.3.1	Numerical model.....	37

3.3.2	Linear actuator power calculations	40
3.3.3	High step stair-climbing mechanism stability margins	45
3.4	Stair ascent	47
3.5	Stair descent	51
3.6	High-step operation.....	55
3.7	Proposed control system	59
3.7.1	Control system	59
3.7.2	Stair and stair edge sensor system.....	60
3.7.3	Stepping algorithm	62
3.7.4	Compensation for wheel cluster rotation	67
3.8	High step and stair climbing mechanism - discussion	68
4	Proposed track based stair-climbing mechanism.....	72
4.1	Introduction - tracked operation.....	72
4.2	Single section track stair-climber.....	73
4.3	Dual section track stair-climber	76
4.4	Further proposal - Controlled pivoting, automatic seat leveling and guidance system	79
4.4.1	Pivoting and auto-seat leveling.....	80
4.4.2	Control simplification	80
4.4.3	Semi-autonomous control system	81
4.4.4	Image processing based guidance system.....	83
4.5	Summary – track based mechanism.....	84
5	Discussion and Conclusion	87
	Acknowledgments	90
	References	91
	Curriculum Vitae	94
	Appendices.....	95
